CAPSTONE PROJECT GRADING RUBRIC

Total Weight: 100%
Score Scale: 1–10 for each criterion
Individual member score: 1–10

ProjectName:.....
.....
Mentor/Evaluator.....

No.	Assessment Criterion	Excellent (8–10)	Satisfactory (5–7)	Poor (<5)	Member 1	Member 2	Member 2	Member 4	Member 5
1	**Complex Problem Analysis & Solution (20%)**	Identifies and solves highly complex engineering problems involving multiple stakeholders, conflicting requirements, and integration of advanced technologies (e.g., AI, Cloud, IoT). Demonstrates strong use of algorithms, models, and engineering principles.	Solves moderately complex problems with appropriate use of fundamental engineering principles and technical methods.	Problem is too simple or routine, lacking scientific or engineering analysis. Does not demonstrate characteristics of complex engineering problems.					
2	**Engineering Design & Multiple Constraints (20%)**	Engineering design clearly demonstrates consideration of public health & welfare, cultural aspects, and environmental sustainability (Green IT). Provides concrete technical design decisions addressing these constraints.	Mentions relevant constraints but analysis remains basic and not tightly integrated into system architecture or design decisions.	Design focuses only on technical implementation and ignores societal, cultural, or environmental impacts.					
3	**Global Contexts & Ethical Impacts (10%)**	Clearly identifies ethical risks (e.g., AI bias, privacy issues) and proposes mitigation strategies. Evaluates system impact in global contexts (e.g., GDPR compliance, cross-border data issues).	Recognizes basic ethical responsibilities and briefly mentions global implications, but mitigation strategies remain limited.	No meaningful consideration of ethics, intellectual property, privacy, or global impact.					
4	**Software**	Development follows a well-	Process applied	Weak process

No.	Assessment Criterion	Excellent (8–10)	Satisfactory (5–7)	Poor (<5)	Member 1	Member 2	Member 2	Member 4	Member 5
	Process & Artifacts (20%)	structured process (Agile/Scrum, CI/CD, version control). Documentation (SRS, SAD, SPMP, code standards) is complete, professional, and technically consistent.	but inconsistently. Documentation exists but lacks depth or consistency.	management. Documentation incomplete, poorly structured, or copied without adaptation.					
5	**Teamwork, Communication & Presentation** (30%)	Team collaboration is highly effective, professional attitude maintained. Presentation is clear, engaging, well-structured, and answers to questions are confident and technically sound.	Team collaboration is acceptable with minor coordination issues. Presentation understandable but lacks clarity or engagement.	Poor teamwork, missed deadlines, uneven contributions. Presentation is unclear and unable to defend design decisions.					

Individual Contribution & Final Grade. Rule: If **Contribution = 0%**, the student receives **F grade**.

StudentID	StudentName	Role	Contribution (%)	Final Grade (1–10)
Student 1		Backend Developer		
Student 2		Frontend Developer		
Student 3		QA / Tester		
Student 4				
Student 5				

Comments (Required if criteria 1, 2, or 3 receive Poor rating): .....
